

8 Benefits of our BioMemoryFoam® Mattress

1 Body hugging comfort

Memory foam is a highly resilient temperature sensitive material that reacts to your body heat and weight. As you lie down on the visco elastic, the foam instantly molds to your curves. This body-conforming feature is what sets memory foam apart from other mattress materials, making it an ideal choice.

2 Ideal for all sleeping positions

The resilient nature of memory foam mattresses means they can comfortably accommodate a variety of sleeping positions, as the material adjusts and evenly distributes body weight. Stomach sleepers will find that their spine is held in perfect alignment, while back and side sleepers enjoy the same level of posture support.

3 Superior motion absorption

Limited motion transfer is another key advantage of today's memory foam beds. The ability to absorb energy and minimize the effects of movement make memory foam an excellent choice for couples. When one partner rolls over or flops around, the other doesn't feel a thing.

4 Less back and neck pain

Visco elastic foam promotes a neutral spinal alignment, which in turn lets you sleep in a position that is both comfortable and supportive. Over the long-term this helps reduce problems with chronic neck pain and back pain.

5 Hypo-allergenic

Anyone who suffers from allergies should consider a memory foam mattress. Polyurethane foam repels mold, mildew and is resistant to dust mites and pet dander.

6 Good pressure relief

Mattresses that are too firm can lead to painful pressure points along the knees, hips, back and shoulders. Because memory foam uniformly disperses body weight across the sleep surface, this problem is eliminated.

7 Customized support

Memory foam used to have a reputation for sleeping hot and having a quick-sand type feel. The latest models have better airflow, sleep cooler at night and offer a customized level of support. Now you can choose from various foam comfort thicknesses as well as low density, medium density and high density memory foam mattresses.

8 Sag free and no sinkage

The latest generation of memory foam beds are made from high-grade adaptive materials that offer just the right blend of “not too soft and not too firm.” You can rest assured there will be no sagging for the life of the mattress, thanks to its open cell design.
